Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Australian Birds of Prey Penny Olsen 1995 In describing Australia's twenty-four species of birds of prey, Olsen relates their complex biology to the continent's unique geography and ecology. She explains why species such as the Nankeen Kestrel and Brown Falcon can range widely from coastal cliffs and river valleys to arid grasslands and wooded hillsides. She describes why others, such as the Red Goshawk, Pacific Baza, and Brahminy Kite, have ranges dramatically limited by their dependence on particular habitats and types of prey.

Raptor Research and Management Techniques Keith L. Bildstein 2007 This is the much anticipated and thoroughly updated version of the popular but long out of print "Raptor Management Techniques Manual". Produced by the Raptor Research Foundation, this is a comprehensive work designed for use by raptor researchers and conservationists and natural-resource managers around the world. Each chapter has been authored by experts in the field and has undergone rigorous review. Not an all-inclusive manual or detailed "how-to" book, this new work reflects the state of the art in raptor research, with up-to-date information on various techniques, and numerous references to additional sources for details and cautions regarding various field and laboratory techniques and management tools. Beginning with a general review of the field of raptor research, it includes insights into field-study techniques, information on the energetics, physiology, pathology, and toxicology of raptors; it covers reduction of management and researcher disturbance, mitigation, population monitoring at migration watchsites, captive breeding, the augmentation of wild populations, and rehabilitation, and concludes with chapters on public education and legal considerations. This book will enhance standardisation in the field, speed improvement in techniques and help those who study and manage birds to better protect them.
